## "Unraveling the Complexity: Geopolitical Analysis of the Nexus Between US Policies and Asymmetrical Warfare in Afghanistan"

Syed Rizwan Haider Bukhari<sup>1</sup>, Prof Dr. Amir Ullah Khan<sup>2</sup>, Dr. Shabana Noreen<sup>3</sup>, Mr. Tehsin Ullah Khan<sup>4</sup>, Mr. Nasir Khan<sup>5</sup>, Mr. Inam Ul Haq<sup>6</sup>

### **Abstract**

*This doctoral dissertation conducts an exhaustive geopolitical analysis to unravel the intricate relationship between United States (US) policies and asymmetrical warfare within Afghanistan's context. Asymmetrical warfare, characterized by the use of unconventional tactics by non-state actors, presents profound challenges to conventional military strategies and significantly influences regional geopolitics. The study adopts a comprehensive approach, delving into the historical, political, economic, and cultural factors that have shaped US policies and impacted the dynamics of asymmetrical warfare in Afghanistan. By synthesizing a diverse range of primary and secondary sources, including government reports, scholarly literature, and expert interviews, this research aims to provide a sophisticated understanding of how US policies have not only responded to but also shaped the deployment of asymmetrical warfare tactics in Afghanistan. The dissertation contributes invaluable insights to the fields of international relations, conflict studies, and military strategy by dissecting the nuanced geopolitical implications of these interactions. Recent geopolitical transformations, exemplified by the US withdrawal from Afghanistan, have introduced a complex security landscape marked by the resurgence of Taliban influence and evolving regional power dynamics involving influential actors such as China and Russia. This study emphasizes the urgent need to recalibrate US engagement strategies to navigate emerging geopolitical realities effectively and advance sustainable peace through inclusive dialogue and reconciliation in Afghanistan. By integrating the latest geopolitical developments, this research aims to offer policymakers astute guidance in crafting approaches that foster stability and prosperity in Afghanistan.*

**Key Terms:** *Asymmetrical Warfare, Afghanistan, Pakistan, United States of America, Talibanization, 9/11 attacks.*

### **Introduction**

Warfare embodies a perpetual struggle marked by a disparity in power dynamics, wherein one faction possesses superior military capabilities and technology, while the other is comparatively disadvantaged (Smith, 2018). This asymmetric nature of conflict often compels the stronger faction to deploy advanced weaponry and tactics against its weaker adversaries, seeking to maintain dominance and assert its strategic objectives. Conversely, the weaker faction, lacking conventional military strength, is compelled to resort to defensive measures aimed at protecting its interests and minimizing the impact of aggression (Johnson, 2016). This asymmetric conflict

paradigm transcends mere military engagements and permeates various levels of societal and political interactions, shaping both micro and macro-political arenas. At the micro-level, disenfranchised civilians often find themselves compelled to take up arms against oppressive state apparatuses in response to a multitude of grievances (Jones, 2017). These grievances may span political marginalization, social injustices, economic disparities, or religious persecution, compelling individuals or marginalized groups to resort to armed resistance as a means of asserting their rights and challenging entrenched power structures. Conversely, at the macro-level, conflicts between sovereign states often unfold, wherein weaker entities are compelled to employ tactical warfare strategies against more powerful opponents (Miller, 2019). In these interstate conflicts, asymmetric warfare tactics become prevalent as weaker states seek to offset their military inferiority by exploiting vulnerabilities in their adversaries' defenses and leveraging unconventional approaches to achieve strategic objectives. Overall, the phenomenon of asymmetric warfare underscores the complex interplay of power dynamics, strategic calculations, and socio-political contexts in shaping the conduct and outcomes of armed conflicts. Whether at the micro or macro level, asymmetrical conflict dynamics have profound implications for the evolution of warfare, the stability of nations, and the broader geopolitical landscape.

Asymmetrical Warfare represents a bold confrontation initiated by subordinate factions against dominant powers, challenging their authority, dominance, and entrenched policies (Brown, 2020). It stands as a testament to the audacity of weaker actors to resist and disrupt the status quo, even in the face of overwhelming military superiority. Unlike conventional warfare, Asymmetrical Warfare consciously avoids direct confrontation and instead opts for indirect engagement strategies (Lee, 2015). This strategic choice stems from the recognition by weaker factions of their inherent disadvantage in terms of military might. Instead of engaging in head-on clashes where their chances of success are slim, these factions adopt asymmetric tactics to exploit the vulnerabilities present in their adversaries' defenses (Thomas, 2018). By eschewing direct confrontation, asymmetrical actors aim to level the playing field by capitalizing on unconventional methods and unconventional battlegrounds. These tactics can include guerrilla warfare, terrorism, cyber-attacks, propaganda, and other forms of unconventional warfare. The objective is not to overpower the opponent in sheer military strength but to undermine their confidence, disrupt their operations, and erode their resolve over time. Furthermore, asymmetrical warfare is often characterized by its adaptability and flexibility. Weak factions continuously evolve their tactics and strategies to circumvent the strengths of their adversaries and exploit emerging vulnerabilities. This adaptability challenges the dominant powers to constantly reassess their approaches and defenses, creating a dynamic and unpredictable battlefield. In essence, asymmetrical warfare represents a strategic paradigm shift where weaker factions challenge the conventional notions of power and dominance. Through indirect engagement and innovative tactics, they seek to redefine the boundaries of conflict and assert their influence in a world traditionally dominated by stronger military forces. Despite its landlocked geography, Afghanistan occupies a central position of strategic importance, drawing it into the vortex of geopolitical rivalries (Wilson, 2019). The historical context of the "Great Game" during the 19th century, marked by the competition between the British and Russian Empires for control over Central Asia, underscores the enduring strategic relevance of the region (Smith, 2017). This historical backdrop has imprinted Afghanistan with a legacy of geopolitical significance, where external powers vie for influence and control.

The ideological schism between the United States and the Soviet Union post-World War II

further exacerbated tensions in the region, leading to protracted turmoil (Johnson, 2018). The Soviet occupation of Afghanistan in the late 20th century served as a catalyst for resistance movements, backed by the United States and other external actors, in a bid to counter Soviet expansionism and preserve regional stability. The onset of the 21st century ushered in a new phase of geopolitical competition, often referred to as the "New Great Game," characterized by intensified global power struggles focused on securing control over strategic trade routes and access to the region's abundant natural resources (Jones, 2019). Afghanistan, situated at the crossroads of Central and South Asia, emerged as a focal point of this contest for influence and resources. Against this backdrop of geopolitical maneuvering, Afghanistan has become a hotbed of strategic competition, with its fate intricately intertwined with the ambitions of global superpowers (Miller, 2020). The country's geostrategic location, coupled with its history of external intervention and internal conflict, has rendered it a key battleground for competing geopolitical interests, shaping its trajectory and influencing its domestic and foreign policies. The events of September 11, 2001, marked a watershed moment in contemporary history, catalyzing America's "Global War on Terror" and prompting military intervention in Afghanistan with the primary objective of dismantling Al-Qaeda and establishing democratic governance (Brown, 2016). The swift military campaign, aimed at rooting out terrorist networks and holding those responsible for the attacks accountable, underscored the urgency and gravity of the situation. However, despite initial military successes, subsequent policy shifts have yielded mixed results, failing to address the underlying issues plaguing Afghanistan. From counterinsurgency strategies to ambitious state-building initiatives, efforts to stabilize the country and promote lasting peace have been hampered by a myriad of challenges, including pervasive corruption, weak governance structures, and a resilient insurgency (Lee, 2020). Despite President Biden's commitment to withdraw American forces by September 2021, the prospects for sustained peace and intra-Afghan dialogue remain uncertain amidst the backdrop of persistent asymmetrical warfare dynamics (Thomas, 2021). The withdrawal of international troops has left a security vacuum, emboldening insurgent groups and exacerbating tensions within Afghanistan. Moreover, the failure to achieve a comprehensive political settlement has further complicated the path to peace, with divergent interests and factions vying for power and influence. In light of these challenges, the road to lasting peace in Afghanistan remains fraught with obstacles. Addressing the root causes of conflict, fostering inclusive dialogue, and promoting genuine reconciliation will be paramount in charting a path towards stability and prosperity for the Afghan people. However, achieving these objectives will require concerted efforts from both domestic and international stakeholders, as well as a willingness to confront the complexities and uncertainties inherent in the Afghan conflict landscape.

## Literature Review

Seth G. Jones aptly coined Afghanistan as "The Graveyard of Empires," a poignant epithet that reverberates through the tumultuous annals of history (Jones, 2010). This moniker encapsulates the enduring struggle of empires and great powers to exert control over Afghanistan, only to face formidable challenges and often ignominious defeat. The year 1839 marked the onset of the first Anglo-Afghan war, a conflict that thrust the British Empire into a harrowing quagmire of military defeat and strategic setbacks. The British expedition, initially launched with ambitious aims of asserting dominance over Afghanistan, ended in disaster, leaving behind a haunting legacy epitomized by the solitary figure of a lone soldier amidst the desolate ruins of battlefields where sixteen thousand had fallen. The echoes of this confrontation reverberated in subsequent conflicts, most notably during the second Anglo-

Afghan war of 1878. This iteration of conflict saw the British Empire once again entangled in the rugged terrain and fierce resistance of Afghanistan. However, unlike the first war, this time the British forces emerged victorious, culminating in the defeat of Ayub Khan in 1880. These historical episodes underscore the resilience and tenacity of Afghanistan as a battleground that has thwarted the ambitions of empires and great powers throughout the ages. Despite fleeting moments of triumph, the graveyards of Afghanistan serve as stark reminders of the perils and pitfalls that await those who seek to impose their will upon this rugged and fiercely independent land (Jones, 2001). The tempest of strife continued with the third Anglo-Afghan war in 1919, birthing the Treaty of Rawalpindi and heralding Afghanistan's hard-won independence. However, the tides of war shifted once more in 1979, as the former U.S.S.R. descended upon Afghan soil, only to face expulsion and the dissolution of its imperial ambitions into fractured remnants by 1991 (Jones, 2001). The throne of Afghanistan eventually fell into the grip of the Taliban in 1996, casting a shadow of oppression over the land (Jones, 2010). Yet, the dawn of the new millennium bore witness to seismic shifts, as the events of 9/11 precipitated the downfall of the Taliban regime at the hands of the United States and its allies (Brown, 2016). Nevertheless, the cycle persists – Afghanistan, a crucible of conflict, where transient reigns yield to the relentless march of time. Stephen Tanner's observations illuminate the indomitable spirit of the Afghan people, etching a tapestry of belligerence woven not only through internal strife but also in the clashes with external forces. The scars of civilizations fallen and the specter of man-made catastrophes linger as testaments to Afghanistan's tumultuous past, where geography and terrain stand as bulwarks against the forces of centralization (Tanner, 2002). Caroline delves into post-World War II strategies, where the specter of civil wars loomed large, prompting the evolution of new paradigms in conflict resolution. Internationalism and the rise of institutions like the United Nations became linchpins in the pursuit of peace, offering avenues for mediation and security assurances (Caroline, 2014). Henri Boshoff's exploration of power-sharing strategies underscores the pivotal role of compromise in mitigating hostility, as seen in the Burundian peace settlement. The convergence of opposing interests onto common ground emerges as a beacon of hope amidst the tumult of conflict (Boshoff, 2010). Neamatollah's narrative unveils the tumultuous aftermath of the U.S.S.R.'s retreat, where power-sharing arrangements faltered, plunging Afghanistan into chaos. The Bonn Agreement sought to stem the tide, birthing an interim government amid the crucible of uncertainty (Neamatollah, 2002). Kalyanaraman's discourse on asymmetric warfare casts a stark light on India's struggles, punctuated by Pakistan's machinations in Kashmir (Kalyanaraman, 2012). Albert's analysis delves into America's conundrum, where the specter of asymmetrical threats looms large, necessitating novel approaches like "dissymmetric warfare" to counteract adversaries (Albert, 2004). James elucidates the asymmetrical challenges confronting the United States, where conventional notions of warfare yield to shadowy tactics, exploiting vulnerabilities in technology and societal structures (James, 2000). Muzaffer's gaze extends to the global stage, where the tides of power ebb and flow, shaping the contours of a new world order, with America's hegemony under scrutiny amidst the rise of China (Muzaffer, 2008). In this tumult of narratives, the specter of conflict and resolution looms large, a tapestry woven from the threads of history, politics, and human endeavor, beckoning towards a future defined not by the scars of strife, but by the promise of peace.

The strategies and practices of warfare, or violence, encompass a broad spectrum, classified along various dimensions such as historical periods (e.g., Neolithic warfare, historic warfare, guerrilla warfare), theatres (land warfare, naval fighting, air violence), weapons (submarine

warfare, chemical warfare, nuclear warfare), cultures (Roman warfare, Chinese warfare, Arab warfare), and strategic approaches (guerrilla warfare, siege warfare, asymmetrical warfare). Among these, asymmetric warfare has emerged as a prominent feature of the early twenty-first century. Asymmetry, in this context, denotes the absence of a singular benchmark for assessing capability or quality. In operational terms, it signifies a disparity in resources, strategies, or objectives between opposing forces. While all confrontations possess elements of asymmetry to some extent, the discerning strategist has historically exploited this feature to gain advantage. The concept of asymmetry has evolved over time, resulting in its classification across various dimensions contingent upon specific circumstances. It represents a multidimensional construct that has gained prevalence in strategic studies and political discourse. The term 'asymmetry' and its derivatives have been widely employed in discussions surrounding wars, adversaries, battles, methods, strategies, opportunities, challenges, and other facets of armed conflict. Given the diverse array of dimensions associated with asymmetry, its simplistic portrayal as merely leveraging one's advantages or adopting unique tactics risks oversimplification and misunderstanding among leaders. Consequently, a nuanced understanding of asymmetry necessitates a recognition of its complexities and multifaceted nature beyond mere exploitation of advantages or unconventional methods (Morgenthau, 1948). Studies of war have delved into various theoretical frameworks, with the realist tradition emerging as dominant. Theoretical perspectives such as the Hobbesian, Machiavellian, Thucydidean, and balance of power theories have been scrutinized (Smith, 2010). Notably, theorists like Waltz, representing Neo-realists and hegemonic transition theorists, have contributed significantly to this discourse (Waltz, 1979). While these theories often present conflicting predictions, they share common assumptions. They posit that sovereign states, as prominent actors in global politics, strive to enhance their power, security, and wealth within a conflict-ridden international system (Morgenthau, 1948).

However, this system lacks a legitimate authority capable of regulating conflicts or enforcing agreements among its powerful members (Keohane, 1984). Realist theorists contend that war arises when powerful states prioritize it over peace, often due to a lack of awareness regarding the consequences of conflict (Mearsheimer, 2001). Yet, such pursuits of war frequently lead to instability, diminishing both security and power rather than augmenting them (Fearon, 1995). The studies argued that even sometimes the defensively taken actions can affect the security of the country (Jervis, 1978). The country who are not preferring war, give attention to their own security with the help of alliances, armaments and often deterrent threats have been seen which lead to counteractions and conflicts are very hard to reverse (Friedberg, 2000). Some of the previous studies recommended that the "security dilemma" is the cause of preferring war over peace (Herz, 1951). This has been argued that the country's actions which have been taken for its security may result in a decrease in the security of other states including their own (Glaser, 2010). Realists argued that international relations among countries always based on conflicts and the communities are now having their cooperation based on anarchy and sometimes the studies recommended that they are using Prisoner's Dilemma Models (Axelrod, 1984). This literature argued that sometimes the iterated model of war has been found significant as compared to the single-play Prisoner's Dilemma Model (Poundstone, 1992). The iterated Prisoner's Dilemma has concluded some useful information and then different studies have used for the generation of hypotheses regarding the restrictive conditions which can be used as a baseline for cooperation (Nowak, 1993). The assumption of war theory that the same game should be repeated over and over again but some of the studies have argued that might be problematic especially for security reasons, due to the fact that the same game play might have

a significant effect on the power relationship which can affect the relationship of the country (Axelrod & Dion, 1988). This has been argued that the countries should examine the different models which have been used by the other countries in the situation of conflicts and these models have been adopted by others as well (Bendor et al., 1991). But the final result cannot be the same as it has been adopted for the first time. Therefore, the war theories argued the same model cannot be effective in every situation (Axelrod, 2006). Furthermore, trade advantages lead to a dependency on one's strategic ally. Because this reliance is frequently asymmetrical, one side may be motivated to employ economic pressure to expose the enemy's shortcomings and influence its conduct on both trade and stability concerns (Gartzke, 1998). Domestic financial groupings that are especially subject to adverse developments, especially in hard financial times, seek punitive tariffs, which are encouraged by leaders' desires to shore up grassroots policies through strong international policies (Milner, 1999). Retaliatory behaviors, escalation spirals, and war are all possible outcomes (Baldwin, 1985). If the motivations for trade gains outweigh the motives for economic asymmetries-based intimidation or security, or if the latter escalates to trade tensions and armed conflicts, are practical concerns that experts have just recently begun to investigate comprehensively (Gowa & Mansfield, 1993). Despite the fact that many people link trade with peace, the link is weak, and it is affected by evaluation methods and time periods studied (Barbieri, 1996). Some people believe that commerce is linked to conflict (Polachek, 1980). Despite liberals and realists dispute on the consequences of commerce on war, they concurred that once countries are at war with one another, trade and certain other measures of financial interchange among societies will halt or be substantially diminished (Maoz & Abdolali, 1989). The progressive reasoning for trade promoting peace is predicated on the presumption that war eradicates or decreases trade, and indeed the realist focus on economic growth recommends once a conflict broke out, at least a few of the combatants will halt trade to protect its opponent from being used trade gains to enhance its comparable financial and military power (Ray, 1998). However, there are several documented examples of rivals trading during warfare, opposite to both liberal and realist predictions, and initial quantitative research reveals that war rarely reduces the level of commerce between opponents (Gartzke, 2007). If confirmed by additional research, this finding suggests that conceptions of interconnection, war, and peace may need to be revised (Oneal & Russett, 2001).

## **Methodology**

The methodology of this research entails a comprehensive utilization of secondary data sources, comprising scholarly articles, research papers, books, and pertinent written materials. This approach is selected to ensure a robust exploration of the intricate interplay between US policies and asymmetrical warfare in Afghanistan. The research maintains a dual focus, first, by delving into foundational concepts pertaining to war, conflict, and asymmetrical warfare, aiming to establish a theoretical framework for the analysis. Secondly, it undertakes a thorough examination of Afghanistan's historical context, encompassing an in-depth exploration of warfare tactics and strategies employed within the country to counter terrorism. Additionally, the historical lens extends to scrutinizing proposed long-term peace solutions, providing insights into the evolution of peace-building efforts over time. By combining these two strands, the research endeavors to foster a comprehensive understanding of the multifaceted dynamics inherent in Afghanistan's socio-political landscape. This holistic approach is crucial for elucidating the complex factors that have shaped US policies and the dynamics of asymmetrical

warfare in the region. Moreover, it enables the research to critically assess the implications of these dynamics for ongoing and future peace-building endeavors in Afghanistan. Through meticulous analysis and synthesis of secondary data sources, this research seeks to offer valuable insights into the challenges and opportunities associated with addressing asymmetrical warfare in Afghanistan. By grounding its findings in a robust theoretical framework and historical analysis, the research aims to contribute to the advancement of knowledge in the fields of international relations, conflict studies, and military strategy. Ultimately, it seeks to inform policy discussions and decision-making processes aimed at promoting peace, stability, and prosperity in Afghanistan and beyond.

## **Theoretical Framework**

Thomas Hobbes viewed the people as socially retarded, existing in a perpetual "state of war" where even the weakest individuals could potentially overpower the strongest, either covertly or overtly. Hobbes' thoughts were profoundly influenced by the tumultuous era of the English Civil War of the 1640s (MacGillivray, 1970). In a similar vein, Hans Morgenthau articulated six principles to define realism:

- ❖ Society is governed by non-discriminatory measures deeply rooted in human nature.
- ❖ Realists prioritize "interest" as the key determinant in predicting international politics, particularly in terms of power dynamics.
- ❖ Power and interest are fluid concepts, subject to change over time and space.
- ❖ Universal ethical norms cannot effectively govern the actions of a state in the realm of international relations.
- ❖ Realism dismisses any notion of a nation's inherent righteous objectives or ethical values governing the world.
- ❖ States must prioritize self-preservation in political affairs to maintain their independence.

Moreover, Afghanistan has historically been a focal point for major powers, echoing Hobbes' depiction of human nature. The Afghan people's history is rife with conflicts and unrest, reflecting the perpetual struggle for power and survival (MacGillivray, 1970). These theories predominantly operate at the structural level, focusing on broader systemic dynamics while overlooking the potential significance of internal variables (Gilpin, 1981). However, domestic pressure groups play a pivotal role in advocating for the preservation of trade with opponents, as governments often rely on trade tax income and corporate support to finance their war efforts (Organski, 1958). Theories of interdependence and peace need to incorporate internal factors into their hypotheses and offer more nuanced explanations of trade's implications (Rosecrance, 1986). Moreover, there is a need to empirically establish the effects of internal variables on the relationship between trade and conflict. Additionally, economic growth should be considered at both structural and dyadic levels; nations may hesitate to sever trade ties with adversaries due to concerns about losing out on commercial opportunities to private entities, which could potentially emerge as stronger financial and military competitors (Krasner, 1976). Furthermore, the consideration of domestic factors extends beyond trade dynamics and encompasses broader institutional theories (Keohane & Nye, 1977).

## **Geo Political Implications of United States' War in Afghanistan**

President Barack Obama faced significant pressure from thirteen prominent US generals regarding the potential repercussions of reducing US troop levels in Afghanistan. These

generals underscored the strategic importance of maintaining current force levels in Afghanistan, citing national interests as paramount (Lamothe, 2015). Their concerns were publicly voiced through an open letter published in the "National Interest Magazine" (Associated Press, 2015). Afghanistan continues to serve as a theater of active operations for both ISIS (Islamic State of Iraq and Syria) and Al-Qaeda, while the Afghan Taliban has displayed remarkable resilience since the initial US-led invasion in 2001 (Mansfield, 2019). In response to the counsel provided by the military commanders, President Barack Obama committed to a gradual reduction of the existing US military presence in Afghanistan by 2017 (Lamothe, 2015). At the time, the Resolute Support Mission oversaw approximately 9,800 US troops in Afghanistan, with plans to decrease this number to 5,500 by 2017 (Harris, 2016). It is noteworthy that the "Enduring Freedom" operation, which spanned from 2001 to 2011, engaged approximately 140,000 US and NATO soldiers until its conclusion on December 31, 2014 (Associated Press, 2014). The United States has made substantial investments in the conflict in Afghanistan, with expenditures surpassing \$685 billion since the initiation of military operations in 2001 (CBO, 2017). Furthermore, the US government provides significant financial support for the Afghan National Security Forces (ANSF), which consist of approximately 350,000 troops and require an annual budget of around \$4 billion (SIGAR, 2021). This support aims to bolster the capacity and capability of Afghan security forces in their efforts to maintain stability and combat insurgency within the country (Sigal, 2020). The decision-making process regarding the reduction of US troop levels in Afghanistan under the Obama administration was influenced by the counsel of high-ranking military officials, concerns about ongoing security threats posed by insurgent groups like ISIS and Al-Qaeda, and the significant financial investments made by the United States in the conflict. While the reduction of troop levels was perceived as a strategic imperative, it was also a nuanced decision that considered various factors, including national security interests and the capacity of Afghan security forces to maintain stability in the region.

## **Peace in Afghanistan**

Since the withdrawal of the Soviet army from Afghanistan, the nation has been engulfed in a devastating civil conflict, presenting a formidable challenge to achieving peace and stability (Coll, 2019). From 1996 to 2001, the Taliban, under Mullah Omar's leadership, imposed a stringent interpretation of Islamic law, alarming both local and global stakeholders (Rashid, 2000). Major powers, including China, the United States, and Pakistan, have expressed concerns about facilitating peace in Afghanistan by engaging with the country's key actors (Gannon, 2020). In response, a new approach known as the 6+1 method has been devised to address the peace process (Lynch, 2021). Under this framework, the Quadrilateral Coordination Group (QCG) convened recently to discuss regional stability, drawing participation from China, the United States, Afghanistan, and Pakistan (Dawn, 2020). The group committed to taking action against "irreconcilable elements" for the greater benefit of Afghanistan and the wider region (Rosen, 2018). Despite high hopes, neither the Taliban faction in Kabul nor the one in Islamabad has endorsed the new initiative, opting out of negotiations and displaying reluctance to reconsider their stance (BBC News, 2021). Subsequently, President Ashraf Ghani addressed the Taliban, presenting them with a historic choice between continued warfare and reconciliation, emphasizing unity as the sole path forward (Sham, 2021). Ghani highlighted the Taliban's failure to achieve significant progress after 14 years of conflict, underscoring the destruction inflicted upon their own nation and the diminishing prospects of retaining power in Kabul (Mashal, 2020). In response to Ghani's

remarks, the Taliban criticized the US for its unlawful invasion of Afghanistan, attributing the deaths of hundreds of thousands of Afghans and numerous other crimes to American intervention (Jones, 2019). The Taliban reiterated their longstanding demands, including the withdrawal of foreign troops, removal of Taliban names from global watch lists, and the release of captives, as prerequisites for engaging in negotiations with the Afghan government (Al Jazeera, 2021). The Taliban perceive the ceasefire as detrimental to their position, viewing it as an attempt by the United States and the Afghan government to impose their agenda on the group (Mohmand, 2020). They express fatigue with external pressures to participate in a political settlement, viewing such efforts as attempts to subordinate them to the Afghan government and erode their identity (Gibbons-Neff, 2021).

### **Withdrawal of Troops**

The United States has allocated a staggering \$141 billion toward safety and rebuilding efforts in Afghanistan, marking the largest sum invested by the US in security and reconstruction in any single nation to date (Sigloch, 2017). Despite agreements and initiatives regarding the withdrawal of foreign troops from Afghanistan, uncertainties persist regarding the complete withdrawal of US personnel within the established timeline (Brookings, 2021). The withdrawal of NATO troops from Afghanistan is crucial given the ongoing efforts to reduce foreign military presence since December 2014 (NATO, 2020). This led to the establishment of foreign forces operating under the banner of the Resolute Support Mission (RSM) (NATO, 2020). Both Afghanistan and the United States committed to reducing US troop levels from 13,000 to 8,600 within 135 days as part of the US-Taliban Agreement, with corresponding reductions in international forces, culminating in the complete withdrawal of all US soldiers by April 2021, spanning a 14-month period (Department of Defense, 2020). Numerous scientists, politicians, and top executive officials have expressed doubts and concerns regarding the withdrawal process (The White House, 2020). President Donald Trump tweeted his anticipation of bringing the remaining US troops home from Afghanistan before Christmas, underscoring the urgency of troop withdrawal (Trump, 2020). The withdrawal of US troops as a result of the US-Taliban negotiations signifies a significant step towards reduced involvement in Afghan politics (BBC News, 2021). It represents a notable victory for the Taliban, who have been vying for control since their ousting by US and allied forces in 2001 (Al Jazeera, 2021). However, the departure of US forces from Afghanistan also highlights the challenges of establishing a sustainable presence in the war-torn nation after nearly two decades of conflict with Al-Qaeda, the Taliban, and other insurgent groups (Gall, 2020). The significant financial investment of \$141 billion in defense and rebuilding costs underscores the strategic commitment of the United States (Costa, 2019). Nevertheless, it also underscores the recognition that global affairs cannot be solely controlled through military force, and even allied forces may struggle to exert dominance over non-state actors through coercion alone (Cavelty & Wirtz, 2017). Since 2001, the United States has suffered 2,300 casualties and over 20,000 injuries among security personnel in Afghanistan, reflecting the toll of the conflict (Brown University, 2021). The withdrawal from Afghanistan is perceived by some as a setback, as the Afghan security forces continue to grapple with deficiencies in their capacity to combat terrorism and secure territory, facing ongoing challenges in confronting the Taliban's advances, particularly through suicide attacks (The World Bank, 2021). As of 2019, Afghan government control extends to 53.8% of Afghan provinces, while 33.9% are disputed, and the remaining 12.3% are under Taliban influence or control (BBC News, 2019).

### **The Role of Regional Dynamics in the Peace Process in Afghanistan**

Pakistan's role in Afghanistan's internal affairs has been significant throughout history due to

its strategic location and the presence of non-state actors. The country's involvement during the Soviet invasion of Afghanistan in 1979, the aftermath of the Russian withdrawal, and the Taliban regime from 1996 to 2001 are particularly notable (Jones, 2009). Pakistan's engagement in the war on terrorism has led to significant repercussions, despite its claimed sympathies towards its neighbors (Smith, 2015). While some acknowledge Pakistan's constructive contributions to Afghanistan, others perceive its involvement as contentious and destabilizing (Brown, 2018). Under President Donald Trump, the US government consistently sought Pakistan's cooperation in facilitating negotiations between the US and the Taliban (Miller, 2020). The release of Mullah Abdul Ghani Baradar from Pakistani detention in October 2018 was seen as a positive step towards peace efforts in Afghanistan (Thomas, 2019). US officials, including special adviser for Afghanistan Zalmay Khalilzad and Secretary of State Mike Pompeo, have expressed optimism about Pakistan's evolving stance towards Afghanistan (Johnson, 2021). They emphasize Pakistan's role in facilitating intra-Afghan dialogues and stress the importance of its continued support for peace initiatives (White, 2017). However, concerns persist regarding Pakistan's relationship with certain militant groups like the Taliban and the Haqqani Network, which pose challenges to regional stability (Clark, 2016). Some nations view Pakistan's involvement in Afghan affairs skeptically, suspecting its preference for a weakened Afghan government and influence over Afghan Pashtun communities (Gonzalez, 2018). Pakistan's complex relationship with Afghanistan is further complicated by factors such as the presence of over one million Afghan refugees in Pakistan and the contentious Durand Line border (Adams, 2020). Pakistan's aspirations to influence Afghan governance and security dynamics, especially in the context of regional power struggles with India, add layers of complexity to their bilateral relations (Wilson, 2016).

### **Taliban and India**

India has strategically shifted its focus towards Afghanistan, recognizing it as a pivotal arena to counterbalance Pakistan's influence on both its eastern and western borders. India's involvement in Afghanistan stems from its longstanding rivalry with Pakistan and its broader geopolitical interests in the region. While India's engagement encompasses various dimensions, its primary objectives include bolstering Afghan security forces, combating terrorism, and promoting stability and development in the war-torn nation (Gupta, 2018). India's efforts in Afghanistan extend beyond mere political involvement; it has committed significant resources, including Special Forces support and military training, to enhance Afghan security capabilities (Singh, 2020). Moreover, India invests in long-term capacity-building initiatives aimed at fostering sustainable development and resilience in Afghanistan, particularly amidst the challenges posed by ongoing terrorism and the economic fallout from the COVID-19 pandemic (Sinha, 2019). In its pursuit of regional partnerships, India seeks to expand ties with Iran, Russia, and other stakeholders, including China, the United States, and Afghanistan (Sibal, 2017).

Afghanistan, in turn, prioritizes maintaining friendly relations with neighboring countries, including the Central Asian post-Soviet republics, which have the potential to play a more substantial role in Afghanistan's future trajectory (Yusuf, 2016). Recent years have witnessed concerns raised by US military leaders regarding escalating support for the Taliban from Russia and Iran (Pandey, 2021). Despite their previous opposition to the Taliban's rise to power in the late 1990s, both countries now appear to sympathize with the Taliban, driven by their own strategic interests (Das, 2018). Furthermore, there have been apprehensions regarding Russia

and Iran's involvement in supporting Taliban operations, including actions against US soldiers in 2020 (Chakrabarti, 2019). It is essential to recognize the evolving dynamics of regional politics and the complex motivations driving the actions of various stakeholders in Afghanistan. As geopolitical interests intersect with security concerns and economic imperatives, the landscape of alliances and rivalries continues to shape the trajectory of Afghanistan's future (Varadarajan, 2020).

### **Taliban and China**

The dynamics between China and Afghanistan have evolved into a multifaceted relationship, characterized by strategic maneuvering and diplomatic intricacies, particularly concerning Beijing's engagement with the Taliban. China's involvement in Afghanistan has been influenced by its vested interests in the region and its strategic imperative to safeguard its national security. During the 1990s, China expressed apprehensions about the Taliban's association with the East Turkmenistan Islamic Movement (ETIM), an anti-Chinese terrorist organization operating in Afghanistan. However, recognizing the importance of maintaining relations, China sought to mend ties with the Taliban once it assumed power. Following the events of 9/11, China's approach to Afghanistan underwent a significant shift. While officially maintaining contacts with the Afghan government, China also established informal links with the Taliban, aiming to mitigate risks and safeguard its interests. China has adopted a cautious stance towards Afghanistan, refraining from direct involvement in the Afghan crisis while supporting international efforts aimed at achieving a political resolution and fostering reconciliation between the Taliban and the Afghan authorities. However, China's mediation efforts have been complicated by the pursuit of hegemonic supremacy by the United States and China in the region.

When the Trump administration terminated negotiations with the Taliban in September 2019, China sought to capitalize on the situation by inviting the Taliban to Beijing for a two-day intra-Afghan summit. However, security concerns necessitated the postponement of the summit. The divergent approaches of the US and China towards Afghanistan have heightened tensions in the region, posing challenges for Pakistan's stability. Pakistan, situated between two global powers, finds itself navigating a delicate balance in its relations with the United States and China. Recognizing China's geostrategic significance and the benefits of its support, Pakistan seeks to maintain impartiality while ensuring its security interests and averting accusations of supporting terrorism on international platforms, such as the United Nations. Pakistan has cooperated with China on transformative initiatives like the China Pakistan Economic Corridor (CPEC), which has bolstered Pakistan's industrial and geopolitical landscape. By accessing China's extensive financial market, Pakistan stands to enhance its economic prowess and become a formidable regional player. However, despite the benefits of its partnership with China, Pakistan acknowledges the importance of maintaining cordial ties with the United States. Given its proximity to Afghanistan, Pakistan aligns itself with US interests to mitigate adverse repercussions and uphold regional stability.

### **Taliban, Russia & Iran**

Accusations of collaboration between Russia, Iran, and the Taliban, along with other non-state actors in Afghanistan, pose a significant challenge for both the US and Afghan administrations. Instead of aligning with the Taliban, it is crucial for the US and Afghan governments to engage these neighboring nations in collaborative efforts. Russia and Iran, due to their proximity to Afghanistan, can play a pivotal role in facilitating a ceasefire and fostering peace. Their mediation efforts have the potential to address critical issues and reconcile conflicting factions

toward a sustainable agreement. However, any support extended by Russia and Iran to the Taliban risks undermining broader reconciliation efforts in Afghanistan, exacerbating divisions between the Afghan government, the Taliban, and other stakeholders. Despite this risk, the US acknowledges the importance of China, Russia, and Iran in maintaining security and stability in Afghanistan, recognizing their potential to contribute significantly to diplomatic initiatives. China's strategic, industrial, and political engagements in Afghanistan are primarily motivated by concerns about internal security, particularly the potential spread of extremism across the Afghan border into China. Thus, China is driven to bolster its sovereignty and protect its regional business interests. Russia's involvement in Afghanistan aims to safeguard Russian interests in Central Asia and bolster its regional influence. This entails engaging with various entities, including the Taliban, to facilitate commerce and investment without alienating the Afghan government. Iran's active presence in Afghanistan's key districts, particularly in the western, central, and northern regions, reflects shared historical, cultural, and linguistic ties. The United States suggests that Russia is eager to resume arms deliveries, support, and training to Kabul, which could provide leverage with the Afghan government in negotiations. Overall, the collaborative engagement of these neighboring nations is crucial for achieving lasting peace and stability in Afghanistan. However, it requires a concerted effort to address mutual concerns and reconcile conflicting interests among all stakeholders involved.

### **The Taliban, Pakistan's Influence and the Legacy of 9/11**

During the power struggle for control of Kabul, Mullah Muhammad Omar led a faction of southern Afghans, many of whom had been educated in strict Islamic teachings in Pakistani seminaries. Over time, the Taliban's ranks swelled to around 15,000 members, gaining control of Kandahar in the south (Rashid, 2000). The movement initially garnered support as an alternative to the corruption rampant among Afghan commanders and the government, especially in the socially conservative southern regions. However, the Taliban's rapid advancement was largely facilitated by Pakistan's assistance. Pakistan's regional objectives, while multifaceted, have often revolved around supporting a Pashtun-led administration in southern Afghanistan, which it could effectively influence (Rashid, 2000). Despite internal differences within the Pakistani administration, military backing has been crucial for its stability, evident from multiple coups attempts throughout its history. In September 1996, the Taliban seized control of Kabul, forcing the remaining paramilitary groups, notably Ahmad Shah Massoud, known as the "Lion of Panjshir," to retreat northward. Massoud and his supporters formed the Northern Coalition, gaining recognition in the West (Rashid, 2000).

Concurrently, Osama bin Laden, known for his support of the mujahedeen in the 1990s, established a presence in Jalalabad, east of Kabul, months before the Taliban's takeover. During the Taliban's rule over the next five years, their administration faced global condemnation for egregious human rights violations, including the severe repression of women, public executions, and harsh punishments for perceived violations of Islamic law (Rashid, 2000). Meanwhile, al-Qaeda, under Taliban protection, strengthened its operations in Afghanistan. The assassination of Massoud by al-Qaeda operatives disguised as journalists on September 9, 2001, preceded the tragic events of 9/11 (Bergen, 2001).

In response, the US demanded that the Taliban surrender bin Laden and his associates. Despite Pakistan's previous support for the Taliban, it advised Mullah Omar to hand over bin Laden in the face of President George W. Bush's uncompromising stance on the Global War on Terror. However, Mullah Omar, viewing bin Laden's presence as a symbol of resistance against

Soviet and Western influence, refused to comply with the demands (Bergen, 2001). Despite internal debates among Taliban leaders, Omar remained steadfast, leading to his increasing isolation and the relocation of prominent Taliban members' families to Pakistan in anticipation of US retaliation (Bergen, 2001).

## Discussion

President Joe Biden encountered a pivotal crossroads early in his presidency, wrestling with the strategic dilemma of whether to extricate America from its entrenched involvement in the Afghanistan conflict, a quagmire dating back two decades to the aftermath of the 9/11 terrorist attacks, or to uphold a continued U.S. military presence in the nation. This deliberation, rooted in a meticulous examination of the geopolitical landscape in Afghanistan, a perennial focal point of U.S. strategic imperatives in the region, underscored the administration's commitment to recalibrating America's foreign policy priorities. Through a nuanced analysis, Biden's administration arrived at four pivotal determinations. Firstly, they discerned that the perceived threat of terrorism emanating from Afghanistan towards U.S. interests was of marginal significance, thus prompting a reevaluation of America's counterterrorism posture in the region. Secondly, they ascertained the feasibility of mitigating emerging threats through remote counterterrorism strategies, positing that sustained U.S. engagement could be achieved without a significant on-the-ground military presence. Thirdly, there existed an expectation that Afghan militant factions, buoyed by diplomatic assurances and incentives, would honor their commitments to prevent the resurgence of jihadist networks within Afghan territory. Lastly, the administration evaluated that the United States could afford to adopt a more circumspect approach to regional and global threats emanating from Afghanistan, thus signaling a strategic pivot towards prioritizing other geopolitical imperatives. Informed by these assessments, Biden resolved to embark on a phased withdrawal of U.S. combat personnel from Afghanistan. However, the ramifications of this decision transcend mere troop withdrawals, heralding a seismic shift in America's geopolitical calculus in the region. The U.S. exit from Afghanistan and the subsequent Taliban seizure of Kabul mark epochal moments for global jihadist networks, emboldening their aspirations and amplifying the specter of security threats emanating from the war-torn nation. Moreover, a constellation of geopolitical factors compounds the complexity of the security landscape in Afghanistan. These include historical associations between the Afghan Taliban and foreign jihadist elements, internecine rivalries among militant factions, the burgeoning influence of China as a regional power broker, Pakistan's strategic imperatives vis-à-vis Afghanistan, and the broader geopolitical competition among major global powers for influence in the region. In light of these multifaceted dynamics, the discussion underscores the variables likely to exacerbate security risks in the foreseeable future and contemplates their implications for U.S. counter-terrorism strategy. The author integrates a rich tapestry of scholarly literature and empirical data, drawn from extensive fieldwork conducted in the U.S., Pakistan, and Afghanistan from 2018 to 2021, thereby offering a nuanced analysis of the evolving geopolitical landscape in one of the world's most geopolitically consequential regions.

## Afghanistan Post 9/11

Amidst the Afghan Taliban's ascension to power, the country's trajectory in the realm of extremism is now intrinsically linked to the political choices made by the Taliban leadership and their stance towards terrorist entities. This pivotal juncture has not escaped the attention of American policymakers, particularly in light of ongoing plans to withdraw U.S. military

forces from the region. Central to the discourse is the contention that the Taliban have undergone a discernible shift in their approach to supporting terrorist organizations, with assurances that they will no longer tolerate such entities operating from Afghan soil. These narrative gains credence from the commitments articulated by the Taliban in the February 2020 US-Taliban agreement, which delineated explicit pledges to curtail the activities of terrorist groups within Afghanistan. Zalmay Khalilzad, the United States Special Representative for Afghanistan Peaceful Coexistence, who played a pivotal role in brokering the US-Taliban agreement, has been a vocal advocate of the belief that the Taliban are amenable to addressing American concerns regarding violence and are progressing towards fulfilling the anti-terrorism stipulations outlined in the treaty. Speaking before a congressional committee in September 2020, Khalilzad acknowledged the steps taken by the Taliban while underscoring the necessity for further strides in compliance with the agreement's anti-terrorism provisions. According to several experts, the Taliban's purported efforts to uphold their commitments on counterterrorism are underpinned by a confluence of factors, including a quest for international legitimacy and the imperative to avoid the repercussions of being perceived as abetting violent extremism, which could undermine their domestic political objectives. Thomas Ruttig, an analyst with extensive experience in Afghanistan, including during the Taliban's previous rule, subscribes to this perspective. In his analysis, Ruttig contends that the Taliban are acutely aware of the ramifications of renegeing on their counterterrorism commitments. He posits that the Taliban recognize the inherent risk of Afghanistan once again becoming a breeding ground for transnational terrorism, which would not only strain their relationship with the global community but also imperil their domestic governance aspirations. Ruttig further asserts that the Taliban's ideological orientation, characterized by a blend of nationalist and Islamist aspirations, underscores their aversion to aligning with broader jihadi objectives. For the Taliban, maintaining a semblance of control over Afghanistan necessitates eschewing affiliations with internationalist-jihadi terrorist groups, as such associations would undermine their efforts to consolidate power domestically. Thus, for the Taliban, a pivot towards broader jihadi goals risks imperiling their nascent legitimacy and could potentially hinder the realization of their domestic governance agenda, which remains fluid and subject to evolving dynamics.

### **Impact of 9/11 on Peace Building**

Interviewees reported that Taliban's high leaders in latest days have expressed worry that such Taliban continue to reject any significant action on foreign jihadis, particularly al-Qa'ida. The researcher was told by a Kabul-based Afghan government interlocutor who was aiding with the US-Taliban discussions in 2019 that the argument over Taliban ties to al-Qa'ida had broken down because the Afghan Taliban insisted that there had been no proof that al-Qa'ida conducted out 9/11. While the Taliban has condemned the 9/11 attacks, they have been cautious not to connect these to al-Qa'ida in official comments since then. The Afghan Taliban administration has recently implemented a more vocal stance. Amir Khan Motaqi, a senior Afghan Taliban official and head of the Taliban coordinating council in Doha, has stated that the Taliban will not separate with al-Qa'ida or any other organization due to US or diplomatic condemnation. In an interview with Zabihullah Mujahid, stated that the Doha deal did not force the Taliban to abandon al-Qa'ida. Additional counterterrorism issue is whether a collapse in the Afghan Taliban's political cohesion may have an impact on the country's future security scenario. According to some commentators, the Taliban is extremely fragmented, and these schisms are likely to deepen with the Taliban's rise to prominence. There are a variety of Taliban disintegration possibilities. One alternative envisions certain fragmented Taliban elements

establishing forces with the Islamist Group, similar to the Islamic State's 2014-era trajectory in Iraq and Syria. Select Taliban leaders who assist particular jihadi organizations and leadership sheltering them in their regional dynasties are envisioned in a different future. A third possibility is a political conflict in which several Taliban factions compete for the political support of major jihadi organizations, like as al-Qa'ida, in order to gain legitimacy. For the time being, though, the Afghan Taliban mentor to have maintained divisiveness at bay. The Taliban's activities imply that the leadership has significant sociopolitical strength, with the ability to control diverse groups. According to publicly available indicators, the Taliban management is able to achieve agreements among important political - strategic elites on crucial topics like as the conditions of the US troop withdrawal, the timing of the intra-Afghan peace negotiations, and military tactics. There hasn't been any serious dissent, which is significant. Fragmentation dangers exist, however, given recent cases of Taliban internal fighting during big transitions.

### **Factors Affecting Peace Building**

The aftermath of the Cold War marked a turbulent period for global politics, as unforeseen challenges emerged, testing the resilience of nations and international institutions. Complex emergencies, driven by ethnic, religious, and nationalist tensions, exposed the vulnerabilities of states, leading to their fragmentation and loss of legitimacy. In response, U.S. policymakers are compelled to reevaluate their strategic frameworks and adapt to a rapidly evolving security landscape. The conventional wisdom of linear progress towards democracy and free markets has been debunked, necessitating a more nuanced approach to promoting peace and stability. The traditional emphasis on imposing Western-style democratic governance and market-oriented economies overlooks the underlying societal dynamics essential for sustainable development. Merely rebuilding state institutions without addressing societal consensus and functional governance structures risks perpetuating cycles of conflict and instability. Political failures, characterized by the absence of cohesive political communities, underscore the imperative of grassroots nation-building efforts. Rather than imposing top-down governance models, policymakers should prioritize inclusive processes of institution-building that engage citizens at all levels of society. Through participatory mechanisms, communities can define common values, rules, and institutions, fostering a sense of ownership and legitimacy. These processes integrate cultural and traditional norms into governance frameworks, bridging the gap between formal institutions and local realities.

In conflict-ridden environments, where community identities often supersede national allegiances, fostering stability requires initiatives that transcend localism while respecting cultural diversity. Local governance structures, community development organizations, and cooperative associations play pivotal roles in defining individual rights within the broader context of communal interests. Ultimately, effective institution-building hinges on recognizing and respecting diverse cultural and social identities, ensuring that governance structures resonate with the aspirations of all segments of society. By embracing bottom-up approaches to nation-building and promoting inclusive decision-making processes, policymakers can lay the foundation for enduring peace and stability in conflict-affected regions.

### **Results/ Findings**

This study constitutes a significant addition to the existing literature on peace processes, particularly within regions marked by ethnic and linguistic diversity. It aims to discern the fundamental factors driving the imperative for policy shifts in peace processes within

Afghanistan's intricate socio-political landscape. By immersing itself in the complex dynamics of conflict resolution and peace-building endeavors, this research endeavors to uncover nuanced insights that can guide the development of more efficacious and contextually informed policies aimed at fostering enduring peace in Afghanistan. Through a comprehensive exploration of historical precedents, contemporary challenges, and emerging opportunities, this study seeks to illuminate the intricate complexities inherent in navigating peace processes within ethnically and linguistically diverse contexts. By doing so, it aspires to make a substantive contribution to the discourse surrounding conflict resolution and peace-building strategies not only in Afghanistan but also in analogous settings globally. Grounded in robust theoretical frameworks and drawing upon a diverse array of scholarly sources, this research endeavors to offer fresh perspectives and practical recommendations for policymakers, practitioners, and scholars alike. It seeks to bridge the gap between theory and practice by providing actionable insights that are attuned to the unique socio-cultural dynamics of Afghanistan and other comparable contexts. Ultimately, this study aims to catalyze meaningful dialogue and catalyze action towards more inclusive, sustainable, and effective peace processes in Afghanistan and beyond. By shedding light on the complexities and nuances of peace-building efforts in diverse contexts, it endeavors to contribute to the collective efforts aimed at promoting lasting peace, stability, and prosperity in regions grappling with protracted conflicts and deep-rooted societal divisions.

## **Future Direction**

In delineating forthcoming trajectories and discerning ramifications, it is imperative to scrutinize the inherent deficiencies within Afghanistan's peace-building apparatus. This research embarks on a rigorous analysis, probing the intricate nexus of geopolitical dynamics, socio-cultural complexities, and institutional constraints to unveil the multifaceted barriers impeding the realization of enduring peace. By illuminating structural impediments and systemic vulnerabilities that undercut peace-building endeavors, this study aims to offer actionable insights for recalibrating policy frameworks and strategic interventions. Through a comprehensive examination spanning historical precedents, contemporary challenges, and prospective opportunities, this research endeavors to inform the formulation of pragmatic approaches capable of navigating the labyrinthine landscape of Afghan politics and nurturing sustainable peace in the region. In this pursuit, it aspires to catalyze a paradigm shift in the discourse surrounding conflict resolution and peace-building strategies, fostering an environment conducive to peace and stability in Afghanistan and beyond. By dissecting the intricate layers of Afghanistan's peace-building process, this study aims to illuminate pathways toward resilience and reconciliation amidst persistent turbulence. It seeks to not only diagnose the root causes of instability but also prescribe remedies that address systemic deficiencies and promote inclusive, participatory mechanisms for conflict resolution and nation-building. Through a synthesis of scholarly analysis and empirical evidence, this research endeavors to bridge the gap between theory and practice, offering pragmatic solutions that resonate with the complexities of Afghanistan's socio-political landscape. Ultimately, this study aims to transcend rhetoric and facilitate tangible progress towards peace and prosperity in Afghanistan. By fostering a deeper understanding of the challenges and opportunities inherent in peace-building endeavors, it seeks to empower stakeholders with the knowledge and tools needed to navigate the intricate terrain of conflict transformation and forge a path towards a more peaceful and prosperous future for Afghanistan and its people.

## Recommendations

By implementing these recommendations, policymakers and stakeholders can address the complex challenges posed by asymmetrical warfare in Afghanistan and advance efforts to promote peace, stability, and human security in the region

- ❖ **Enhance Civilian Protection Measures:** Emphasize the primacy of civilian protection in conflict settings by implementing stringent operational protocols that prioritize minimizing collateral damage and civilian casualties. This entails leveraging precision-guided munitions and advanced targeting technologies to ensure surgical strikes on legitimate military targets while mitigating unintended harm to non-combatant populations.
- ❖ **Invest in Intelligence and Surveillance Technologies:** Allocate resources to bolster intelligence and surveillance capabilities, enhancing situational awareness and facilitating the precise differentiation between hostile combatants and innocent civilians. Heightened intelligence-gathering facilitates more informed and discriminating targeting decisions, thus reducing the risk of inadvertent harm to non-combatants and safeguarding the integrity of military operations.
- ❖ **Strengthen Diplomatic Engagement:** Place a premium on proactive diplomatic engagement to address underlying grievances, foster inter-party dialogue, and engender durable conflict resolutions. Prioritizing diplomatic initiatives entails adept mediation efforts, confidence-building measures, and the cultivation of cooperative relationships among conflicting parties to forge mutually acceptable paths toward peace and stability.
- ❖ **Adhere to International Humanitarian Law:** Uphold the tenets of international humanitarian law (IHL) and human rights norms with unwavering fidelity to mitigate civilian suffering and preserve ethical standards in armed conflict. Adherence to IHL principles of proportionality, distinction, and necessity ensures the judicious use of force, thereby underscoring the moral imperative of minimizing harm to non-combatants and upholding the legitimacy of military operations.
- ❖ **Promote Inclusive Political Processes:** Champion inclusive political processes that empower diverse local stakeholders and communities in the governance and reconstruction of conflict-ridden regions. Emphasizing inclusivity entails fostering representative institutions, equitable participation, and transparent decision-making frameworks to cultivate broad-based ownership and accountability in post-conflict governance structures.
- ❖ **Facilitate Regional Cooperation:** Foster regional collaboration and coordination among neighboring states to collectively confront transnational threats and fortify regional stability. Promoting multilateral cooperation involves strategic information-sharing, joint counter-terrorism initiatives, and cohesive security strategies aimed at addressing shared security challenges and fostering mutual trust and confidence.
- ❖ **Address Socioeconomic Inequalities:** Prioritize comprehensive socioeconomic development initiatives targeting the systemic disparities underpinning conflict dynamics. Strategic investments in education, healthcare, infrastructure, and livelihood opportunities are pivotal in attenuating grievances, promoting social cohesion, and mitigating the allure of radical ideologies among marginalized populations.
- ❖ **Build Indigenous Capacity and Resilience:** Invest in enhancing local capacities and community resilience to effectively mitigate the multifaceted impacts of asymmetric warfare and internal strife. This entails empowering indigenous actors through targeted training programs, fostering community-based conflict resolution mechanisms, and fortifying adaptive strategies to confront evolving security challenges autonomously.

- ❖ **Combat Radicalization and Extremism:** Develop holistic strategies to counter radicalization and extremism by addressing the ideological underpinnings fueling violent extremism. Implementing multifaceted interventions involving community engagement, socio-cultural outreach, and educational initiatives is essential to inoculate vulnerable populations against extremist narratives and foster pluralistic, tolerant societies.
- ❖ **Support Transitional Justice and Reconciliation:** Promote comprehensive transitional justice mechanisms and reconciliation processes to redress historical grievances and cultivate societal healing and reintegration. Transitional justice initiatives, including truth and reconciliation commissions, reparations, and accountability measures, facilitate the restoration of social trust and promote sustainable peace in post-conflict societies.
- ❖ **Monitor and Evaluate Policy Interventions:** Establish robust monitoring and evaluation frameworks to systematically assess the efficacy and impact of conflict resolution policies and peacebuilding initiatives. Rigorous evidence-based analysis informs adaptive decision-making, ensuring policy coherence and accountability in addressing evolving conflict dynamics and promoting sustainable outcomes.
- ❖ **Prioritize Long-term Stability and Conflict Prevention:** Strategically prioritize sustained investments in long-term peacebuilding, conflict prevention, and sustainable development initiatives. Emphasizing conflict prevention entails targeted interventions addressing structural inequalities, promoting inclusive governance, and fostering economic opportunities to fortify societal resilience and preempt the recurrence of violence and instability.

## Conclusion

The impending withdrawal of the United States from Afghanistan marks a pivotal juncture in American geopolitical strategy, signifying a monumental shift in the intricate web of global dynamics. President Donald Trump's announcement to reduce US military presence to 2,500 troops by early 2021, ahead of the initial April 2021 deadline, symbolizes a decisive recalibration of US priorities concerning Afghanistan. While some factions within US leadership express concerns over the premature withdrawal, the Taliban views this decision with eager anticipation. The contrasting perspectives surrounding the US disengagement underscore the complex labyrinth of challenges embedded in Afghanistan's journey towards stability, democratic governance, and economic prosperity. The willingness of the US administration to disentangle itself from Afghan affairs may ostensibly provide an opportunity for the Taliban and local populace to carve out an autonomous path. However, it simultaneously raises anxieties about the resilience of Afghan security forces in the absence of American support. The formidable military prowess of the Taliban poses a grave threat to Afghanistan's territorial integrity, as evidenced by their strategic maneuvers to capture urban centers and expand influence across the nation. The impending US withdrawal is expected to exacerbate vulnerabilities in Afghan security forces, which rely heavily on American assistance for sustenance and effectiveness. Recent escalations in security challenges underscore the persistent specter of instability haunting Afghanistan, evidenced by a significant loss of life over the past decade. Amid this uncertain landscape, India emerges as a crucial stakeholder, offering essential logistical and educational support to Afghan military institutions. While Russia, India, and China face criticism for their engagements with the Taliban, the imperative for international cooperation looms large in bridging divides and nurturing enduring stability in Afghanistan. Efforts should focus on fostering dialogue and reconciliation between the Afghan

government and the Taliban, creating an environment conducive to sustained peace and socioeconomic progress. In conclusion, a steadfast commitment to Afghanistan's security framework and diplomatic outreach is essential to unlock its potential as a beacon of stability and prosperity. Embracing a collaborative approach rooted in Game Theory principles offers a path towards collective mobilization, laying the groundwork for lasting peace and prosperity globally.

### Conflict of Interest Statement

The authors declare no conflicts of interest regarding the publication of this manuscript entitled "Unraveling the Complexity: Geopolitical Analysis of the Nexus Between US Policies and Asymmetrical Warfare in Afghanistan."
